

When using Dura Stone material, the size, width, thickness and shapes of furniture are endless, therefore designers can enjoy a freedom of imagination.

A cast stone sink is installed into a tabletop without connection seams. Seamless way of connection of the same colour sink and the tabletop prevents accumulation of impurities and moisture, and produces an impression of wealth.

Dura Stone is comprised of aluminium trihydrate, homogenously combined with modified resin, therefore the colour and structure of this material is visible throughout the whole thickness of Dura Stone.
